

## Skin Analysis

We use the most up to date technology to provide a 7 point skin analysis. The results are discussed and also emailed to you. You are able to actively engage and choose the areas you would like to improve.

A targeted protocol, specific to your needs, is designed and implemented by your clinician.

The skin analysis measures:

- Sensitivity
- Wrinkles
- Pigmentation
- Sebum
- Pores
- Elasticity
- Acne

The results can also be used to track your progress as you travel through your skin rejuvenation and repair process. Comparison analyses are done periodically throughout your treatment.

Skin analysis photos are taken at the start of the process and then periodically during your treatment as a way of checking the treatment progress.
